

GOD CREATED UNUSUAL GREAT CREATURES THAT FLEW IN THE AIR.

Dimorphodon (dye-MORE-foh-don), “two-formed tooth,” and Rhamphorhynchus (RAM-foh-RINK-us) “beak snout,” were both reptiles with long arm bones and a very long fourth-finger bone that formed the frames for their clawed wings which were rather like a bat’s. Archaeopteryx (AR-ke-OP-ter-riks), “ancient wing,” also had claws on its wings, but it was a true feathered bird, rather than a reptile. There are birds living today with claws on their wings – young South American Hoatzins (ho-WAIT-sins), the African Turaco and the Ostrich.
