Outline of the Junior True Science Workshop #3 – a hands-on science experience

Sodium's reaction with electricity – the electric pickle

Chemical reactions: solid to liquid – peeled raw egg

Viscosity and density – layering liquids

Crosslinking polymers, liquid to solid – making silly putty

Exothermic reactions and the changing states of matter – making ice cream in a baggie

The Junior True Science Workshop is intended to introduce 2nd grade and younger students to hands-on science, but there is no expectation that they will fully comprehend the laws behind the activities that they will be doing. The Workshop lasts approximately 1 hour and can only be held in conjunction with a regular True Science Workshop.

If the Lord is abandoned as Creator, He will soon be lost as Savior.
